Product Overview — NewBridge Final Expense

What this product is

NewBridge Final Expense is a simplified-issue, instant-decision whole life insurance product. It is designed to help cover end-of-life expenses such as funeral costs, probate fees, medical bills, and other final debts.

The carrier is Continental General.

Death benefit options

The product offers two death benefit types:

- **Level death benefit** — the full death benefit is payable in all policy years.
- **Modified death benefit** — a graded death benefit in the early years (this may vary by state):
 - Year 1: 110% of premiums paid (including any rider premium, less outstanding debt).
 - Year 2: 120% of premiums paid (including any rider premium, less outstanding debt).
 - Year 3 and later: 100% of the face amount.
- If death is the result of an accident, the full face amount is paid from day one.

Which benefit type applies is determined by underwriting — agents quote it but do not choose the final class.

Who can be covered

- Gender: male or female.
- The policy owner must be the same person as the insured.
- Acceptable beneficiary relationships: spouse, domestic partner, child, parent, and sibling.

Issue ages are based on age last birthday and depend on the death benefit type and tobacco use:

- **Level death benefit** — Non-Tobacco: ages 50–85. Tobacco: ages 50–80.
- **Modified death benefit** — Non-Tobacco: ages 50–80. Tobacco: ages 50–75.

Key product rules

- Premiums can be paid monthly, quarterly, semi-annually, or annually, and are paid until age 100. The policy matures at age 121.

- Replacements and 1035 exchanges are not permitted.
- Policy reinstatement is allowed with a statement of good health.
- Grace period: 31 days.
- Standard contestability terms apply.
- Misstatement of age or gender: the payable amount is the benefit that the last premium paid would have bought at the correct age/gender.
- No conversion privilege.

Licensing

Selling this product requires a Life (Life and Annuity) license. For agent contracting and licensing questions, contact the Contract and Licensing Team at 866-830-2181 or Licensing@cgic.com.

Coverage Amounts and Eligibility — NewBridge

Final Expense

Coverage range

- Minimum coverage: \$2,000
- Maximum coverage: \$35,000
- Coverage is selected in \$1,000 increments.
- Default starting quote amount: \$2,000.

Maximum coverage by age and rate class

The maximum available coverage depends on the applicant's age and the rate class assigned:

- **Under age 75:** Level Preferred \$35,000 · Level Non-Tobacco \$35,000 · Level Tobacco \$35,000 · Modified Non-Tobacco \$20,000 · Modified Tobacco \$20,000
- **Age 75:** Level Preferred \$20,000 · Level Non-Tobacco \$15,000 · Level Tobacco \$15,000 · Modified Non-Tobacco \$10,000 · Modified Tobacco \$10,000
- **Ages 76–80:** Level Preferred \$20,000 · Level Non-Tobacco \$15,000 · Level Tobacco \$15,000 · Modified Non-Tobacco \$10,000 (Modified Tobacco is not available in this age band)
- **Ages 81–85:** Level Preferred \$20,000 · Level Non-Tobacco \$15,000 (only Level Preferred and Level Non-Tobacco are available in this age band)

Issue ages

Issue ages are based on age last birthday and depend on the death benefit type and tobacco use:

- **Level death benefit** — Non-Tobacco: ages 50–85. Tobacco: ages 50–80.
- **Modified death benefit** — Non-Tobacco: ages 50–80. Tobacco: ages 50–75.

Premiums are paid until age 100; the policy matures at age 121.

Eligibility basics

- The policy owner must be the insured.
- The application asks whether the applicant is a US citizen or legal permanent resident.

- Available in 47 states — see the state availability documentation for the list (not available in California, Florida, New York, or South Carolina).

Riders — NewBridge Final Expense (511801)

Included rider (no additional cost)

- **Accelerated Death Benefit Rider (ADBR) for Terminal Illness** — included at no additional cost on every policy, with both the Level and the Modified death benefit. It lets the insured access part of the death benefit early if they are diagnosed with a qualifying terminal illness.

Optional rider (additional cost)

- **Accidental Death Benefit (AD) rider** — optional, for an additional premium, and must be elected at the time of application (at issue). It pays an additional benefit if the insured dies as the result of an accident.
- Available only with the **Level** death benefit — it is not offered on the Modified death benefit.
- Available for issue ages 50–80.
- Rider benefit amount: \$2,000–\$35,000, matching the base policy's coverage amount.
- Coverage and premiums for the rider end at age 100.

The AD rider's premium depends on the applicant's age; the exact amount comes from the eApp's quote screen.

Not currently offered

- A Child/Grandchild rider is **not currently available** on this product.

Cash Value, Loans and Policy Provisions — NewBridge Final Expense (511801)

As a whole life policy, this product builds cash value over time. The following provisions apply.

Loans and withdrawals

- Policy loans are available against the policy's cash value.
- The loan interest rate is fixed at 8% (the maximum allowed).
- Maximum loan amount: the net cash value, less any due and unpaid premiums.
- Minimum loan: \$500. Minimum payment: \$25.

Surrenders

If the policy is surrendered, upon termination the policyholder receives the cash surrender value — or, if applicable, a refund of unearned premiums (including any rider premiums).

Grace period

The policy has a 31-day grace period for premium payments.

Cash value and non-forfeiture

- The policy accumulates cash value at the statutory maximum non-forfeiture interest rate.
- There is no automatic premium loan option — premiums are not automatically paid from the cash value.
- If premiums stop, the automatic non-forfeiture option is Extended Term Insurance (ETI); taking the cash surrender value instead is available as an optional alternative.

Premiums and Payment — NewBridge Final Expense (511801)

Payment methods

- Bank draft (ACH from a checking or savings account).
- Debit and credit cards.
- If a draft fails, the payment method defaults to direct bill.

Who can pay (payor)

The payor can be the applicant, the applicant's spouse, or the applicant's domestic partner. If the payor is someone other than the applicant, the eApp collects that person's details (name, contact, and banking information).

Payment frequency (modes)

Premiums can be paid monthly, quarterly, semi-annually, or annually. Premiums are paid until age 100.

Draft date options

- The first draft can be scheduled for a future date, up to one month from the application date.
- A specific day of the month, from the 1st through the 28th.
- A specific day within a specific week of the month.
- Alignment with the applicant's Social Security payment date.

Changing coverage after issue

- Coverage increases are not allowed. To add coverage, the applicant purchases additional coverage rather than increasing the existing policy.
- Coverage decreases are allowed, down to the policy's minimum coverage amount.

Policy fee

There is a \$25 annual policy fee, applied according to the payment frequency.

Application Journey — NewBridge Final Expense (511801)

The normal application flow

A standard application moves through these steps in order. The eApp controls navigation; some steps branch or repeat based on the applicant and underwriting, but the typical path is:

1. **Quote (QO100)** — start the application and generate the initial quote.
2. **Quote details (QO105, QO110, QO115, QO120)** — coverage amount, product options, and the rest of the quote inputs.
3. **Identity & interview (IV100 through IV120)** — applicant identity plus the interview/underwriting questions.
4. **Consent (CO100)** — the agent sends the applicant a consent request by email or text. The applicant opens the link and gives their consent on their own screen. The application continues once consent is completed.
5. **Beneficiaries (BE100)** — name and set up the beneficiaries.
6. **Decision wait (DW100)** — the application is processed for an instant decision.
7. **Offer (OF100)** — the decision/offer is presented for review.
8. **Payment (PM100)** — payment details are collected.
9. **Signing (SA100, SC100, SN100)** — the agent sends the applicant a review- and-sign request by email or text. The applicant opens the link, reviews the application, and e-signs on their own screen. The application continues once signing is completed.
10. **Producer certificate (AC100)** — the producing agent's certification.
11. **Congratulations (CG100)** — the application is complete and submitted.

After CG100 the application is submitted; a completed application typically sits in a "Pending Issue" state while final processing happens.

Steps where the applicant acts on their own screen

Two steps hand off to the applicant. At each one, the agent sends a link and the applicant completes their part separately before the agent can continue:

- **Consent (CO100)** — the agent triggers a consent request (email or SMS); the applicant opens it and consents.

- **Signing (SA100/SC100/SN100)** — the agent triggers a review-and-sign request (email or SMS); the applicant opens it, reviews the application, and e-signs.

If the applicant hasn't received the email or text, re-check the email/phone on that step and resend, and have the applicant check spam. The application will not advance past these steps until the applicant completes their part. After signing is done, the agent completes the producer certificate (AC100) and reaches Congratulations (CG100).

What an agent is doing at each stage

- **Quote steps (QO...)**: entering coverage amount and product selections to produce the quote.
- **Identity & interview (IV...)**: confirming the applicant's identity and answering the health/lifestyle interview questions that feed underwriting.
- **Consent (CO100)**: the applicant agrees to the required disclosures before underwriting proceeds.
- **Beneficiaries (BE100)**: adding beneficiaries and their relationship to the insured.
- **Decision wait / Offer (DW100 → OF100)**: the platform returns an instant decision, then the offer is shown for acceptance.
- **Payment (PM100)**: setting up how premiums will be paid.
- **Signing (SA/SC/SN...)**: the agent sends the applicant a request to review and e-sign; the applicant completes it on their own screen.
- **Producer certificate (AC100)**: after the applicant has signed, the agent certifies the application.

Notes for agents

- This is the standard path. The exact screens and their order can vary by applicant and by the underwriting outcome — the eApp decides what comes next.
- Two steps depend on the applicant: consent (CO100) and signing (SA100/SC100/SN100). The application pauses at each until the applicant opens the emailed/texted link and completes their part.
- If an application appears stuck on the decision-wait step, or the flow will not advance past a step showing a warning, that's a support/underwriting matter — a human should follow up.

Application Screens — NewBridge Final Expense (511801)

A page-by-page guide to the eApp screens. Each screen is listed with its code, what the agent does there, what is entered or shown, and anything notable. Where a screen "advances to the next step," the exact destination is decided by the system from the applicant's answers.

Quote input (QO100)

The opening lead form to start a quote and pre-application assessment ("Get a quote and pre-approval assessment"). The agent enters the applicant's legal first and last name, date of birth, gender at birth, residence ZIP code, and whether they have used tobacco in the last 12 months. State of residence is filled in automatically from the ZIP. **Next** goes to the quote; there is no Back. Out-of-range age/tobacco combinations, or a ZIP in a state where the product isn't offered, are blocked with an inline error.

Quote (QO105)

A quote builder to shape coverage and premium and see the price. The agent can quote by coverage amount or by monthly premium (a toggle), enter the amount, see each rate class with its premium, and turn on the optional Accidental Death Benefit rider. A Policy Total card shows coverage, rate class, and the premium with a Monthly/Annual switch. The Accelerated Death Benefit for Terminal Illness rider is included at no cost. Changing the amount recalculates automatically. **Next** normally shows the Assessment Result screen; **Back** returns to QO100.

Assessment Result (MS100)

A brief pre-application assessment interstitial shown right after the quote. It displays one of three results: the applicant looks like a good fit; the applicant is not likely to be eligible (with a suggestion to consider another product); or a neutral "we couldn't complete an assessment, please proceed." Actions are **Proceed to Application** and **Back**; on the "not likely eligible" result the agent can instead abandon the quote. If the assessment errors or is slow, it falls through to the neutral "proceed" state and never blocks the agent.

Confirm eligibility (QO110)

A checklist of eligibility conditions the agent must confirm they discussed with the applicant, plus a switch: "I confirm that I have discussed these conditions with my applicant and they meet ALL the above standards." **Next** is enabled only after the switch is on.

Producer questions (QO115)

Controlled-business disclosure questions about the agent's relationship to the applicant: interview format (in person / virtual); whether the agent is the proposed insured or related to them; and, if related, the relationship (self, spouse/partner, child, grandchild, parent, sibling). **Next** stays disabled until the required answers are given.

Security warning (QO120)

A short security and privacy warning that must be acknowledged with an "I Confirm" switch before continuing.

About you — personal info (IV100)

Collects the applicant's core identity details: legal first/middle/last name, Social Security number, gender, date of birth (age shown read-only), whether they are a US citizen or legal permanent resident, country of birth (and state of birth if the United States), and whether they have a driver's license (and if so, its number and state). The SSN is checked for format and validity. If the person already has an application in progress, the agent is routed to resume it.

About you — contact information (IV105)

Collects the physical home address (with address autocomplete), a confirmation that the applicant will sign in their state of residence, an optional separate mailing address, email, mobile phone, whether it is a mobile phone, and — if mobile — agreement to receive texts for eConsent/eSignature. The applicant's email and phone can't match the agent's own. ZIP must match the state.

About you — existing coverage (IV110)

Captures existing or pending life insurance and annuity coverage and, where required, the replacement (NAIC) flow. The agent answers whether the applicant has existing/pending coverage and whether this application is intended to replace it, and can add a table of existing policies (company, contract number, type, amount, year issued, replacement/financing). Some answer combinations trigger a "hard stop" alert with an Abandon Application button; financing is not allowed.

Health & lifestyle questions (IV115)

The dynamic health-and-lifestyle interview (underwriting questions). Questions are served a page at a time and branch based on answers; content varies per applicant. Answers save as they are entered, and unanswered required questions block **Next** and scroll to the first missing item. When the interview is done, **Next** goes to the review screen.

Review your answers (IV120)

A consolidated, editable review of everything captured, grouped into expandable sections (ID details, existing coverage, and each health/lifestyle section). A sticky note reminds the agent that once past this screen the applicant's responses can't be altered. **Next** submits the reviewed application.

Collect party consent (CO100)

Where the applicant's consent is obtained so their information can be analyzed and the medical exam skipped. The agent sends a consent request to the applicant by **email or text**, the applicant opens the link and consents on their own screen, and a PIN is issued. The agent verifies the PIN, ticks a certification, then continues. **Next** is enabled only after the PIN is verified and the box checked. If the applicant's email/phone can't be validated, a warning appears and the agent may need to correct the details. If the applicant hasn't received it, re-check the email/phone and resend, and have them check spam.

Beneficiary assignment (BE100)

Add primary and contingent beneficiaries. For each: first and last name, relationship to the applicant (spouse, domestic partner, child, parent, sibling), date of birth, Social Security number, share percentage, and whether primary or contingent. Primary shares must total 100%; if there are any contingent beneficiaries, their shares must also total 100%.

Underwriting decision (DW100)

A processing / decision-wait screen while the underwriting decision is retrieved. If the decision isn't ready after several checks, a "Notify Me" option lets the agent step away and be notified later. The screen then routes automatically to the resulting page (offer, a report, a review step, ID verification, and so on) — the outcome is shown on the destination page.

Offer (OF100)

The approved offer, where final coverage and premium are confirmed ("Congrats, the applicant has been approved"). The agent can adjust the coverage amount (or base premium); the approved rate class is shown read-only, with the Accidental Death Benefit rider toggle and a Policy Total card (Monthly/Annual). **Next** accepts the offer and goes to payment. On load it re-checks age and may show a warning or reroute if the applicant's age has changed.

Payment (PM100)

Collects bank draft details, payer, schedule, and frequency. Payment method is immediate draft, a chosen day of the month, a specific week-and-day of the month, or Social Security benefits billing (matched to the SS deposit schedule). Frequency is monthly or annually. The payer can be the applicant, spouse, or domestic partner; if not the applicant, payer details are collected. Banking information includes routing number, institution name, account number (entered twice), and account type. Bank details are validated; if they don't validate the agent is asked to re-check them.

Secondary addressee (SA100)

Optionally names a secondary addressee who receives copies of past-due/lapse notices. The agent answers whether to add one; if yes, enters that person's name and mailing address. The fields only appear when "Yes" is selected.

Split commissions (SC100)

Assigns commission split across producers. For each producer the agent enters an Agent ID and a share percentage (the writing producer is pre-listed at 100%). Each added agent is verified, and the total share must equal 100% to proceed.

Collect eSignature (SN100)

Obtains the eSignature from the applicant (and the payer, if a different person). The agent sends the request by **email or text**; the signer opens the link, reviews the signature packet, and e-signs on their own screen, receiving a PIN. The agent verifies each signer's PIN and ticks each certification before continuing. The application times out 30 days after it was started, and each signer needs their own email/phone (not the agent's).

Producer certification (AC100)

The agent's own certification and eSignature step. The agent confirms the controlled-business and existing-coverage/replacement answers, reviews the commission-split summary, and acknowledges each required document (Application for Whole Life Insurance, Modified Endowment Contract Disclosure, Terminal Illness Accelerated Death Benefit Rider disclosure, and — in replacement cases — the NAIC Replacement Notice), then applies their eSignature. The eSignature button stays disabled until all required documents are acknowledged.

Congratulations (CG100)

The success screen confirming the application was submitted. It shows the applicant's name, the recurring monthly/annual premium, the base coverage, and the Accidental Death Benefit rider amount (or "None"). The agent can start a new application.

ID check (ID100)

Shown when the applicant's identity couldn't be verified. The agent re-checks and corrects the personal information (name, SSN, date of birth, gender, address). A red banner appears when this is the last identity-check attempt; a further failure can close the application, with a note that the applicant must wait several days before reapplying.

MIB reask (MR100)

Shown when third-party data warrants re-asking some health questions. The agent is advised to explain why to the applicant, then the flagged questions are presented again. **Next** revalidates and moves to the decision step. Some outcomes show an "unable to proceed" notice.

Not eligible (IE100)

A "We're sorry — your applicant is not eligible for this product" screen. It offers an Important Customer Notice and a link to the underwriting eligibility report, plus Close Application.

Age ineligible (IE150)

A short "We're sorry" screen stating the applicant's age exceeds the maximum for an eligible rate class. The only action is to close the application.

Underwriting eligibility report (UW100)

A producer-facing screen to share the detailed underwriting report with the applicant. It shows the applicant's name and buttons to open the report and to send or resend it by email (or text, if the applicant consented to SMS).

Application being reviewed / referred underwriting (RW100, RW105, RW110)

A "The application is being reviewed" screen (expect a decision in 1–2 business days). Depending on the outcome, the agent either continues when a decision path is available, sees a revised (capped) situation with a continue option, or is told to start a new application.

Multiple application inquiry (MI100)

Shown when several recent applications are detected. The agent lists each recent application (estimated date, company, amount, status) and explains, in a required free-text field, the reason for the number of applications and total coverage sought. **Submit** advances to the decision step.

Age-related offer screens (AU100, AU105, AU205)

These handle changes tied to the applicant's age. One cancels the application because the applicant's age changed and they're no longer eligible; one explains that the age changed since the offer was accepted and an updated offer is coming (with a "View Updated Offer" action); and one notifies that the applicant has been approved with a capped-amount note.

Revised underwriting payment (PM105)

The payment screen used in the revised-underwriting flow. It first loads the revised offer's payment quotes so the agent can confirm the updated coverage and premium, then collects the same payment details and banking information as the standard payment screen.
